

HIV TEST KIT DISCLAIMERS

ELISA Test

"At present there is no recognized standard for establishing the presence or absence of HIV-1 antibody in human blood." (Abbott Laboratories, ELISA HIV Antibody Test Insert, section "Sensitivity and Specificity")

"EIA testing cannot be used to diagnose AIDS... The risk of an asymptomatic person with a repeatedly reactive serum developing AIDS or an AIDS-related condition is not known." (Abbott Laboratories, ELISA HIV Antibody Test Insert, section "Limitations of the Procedure")

"Clinical studies continue to clarify and refine the interpretation and medical significance of the presence of antibodies to HIV-1." (Abbott Laboratories, ELISA HIV Antibody Test Insert, section "Limitations of the Procedure")

Western Blot Test

"Do not use this kit as the sole basis of diagnosis of HIV-1 infection." (Eptope, Inc., Western Blot HIV Antibody Test Insert, section "Limitations of the Procedure")

"The clinical implications of antibodies to HIV-1 in an asymptomatic person are not known." (Calypte, Cambridge Biotech HIV-1 Western Blot Kit, section "Limitations of the Serum and Plasma Procedure")

PCR "Viral Load" Test

"The AMPLICOR HIV-1 MONITOR test, is not intended to be used as a screening test for HIV or as a diagnostic test to confirm the presence of HIV infection." (Roche, Amplicor HIV-1 Monitor Test Kit, section "Intended Use")

"It's not even probable, let alone scientifically proven, that HIV causes AIDS. If there is evidence that HIV causes AIDS, there should be scientific documents which either singly or collectively demonstrate that fact, at least with a high probability. There are no such documents."

Dr. Kary Mullis, Nobel Laureate for PCR (viral load) technology, HIV not Guilty, Oct.5, 1996
